### PREFACE

A GENERAL preface to the entire work is prefixed to the first volume. A few observations extracted from Chapter I of that volume are reproduced below as they may conduce to a better understanding of the scope and contents of the body of the work

- 2 Method of verification and abbieviations —The ch ef abbieviations used in the Ephemeris are (1) the indication of ending moments of tithis and nakshatras as decimals of a day, instead of by ghatika, and palas or hours and minutes (2) the substitution of numbers for the names of nakshatras A key to the latter set of abbreviations will be found at the bottom of each page, while a key to the former has been inserted in each copy of the work as a detachable book marker as well as on the inner side of the cover For the rest, all the Indian and Muhammadan aetails corresponding to an English date are given in its immediate neighbourhood Thus in the twenty days commencing with Tuesday, 12th December, AD 836 and ending with Sunday, 31st December, there are several changes of Hindu and Muhammadan months, there is one day without its own tithi, one day without its own nakshatia, and one day with two tithis these changes and facts are visible at a glance without having to be gleaned with much trouble, from the top, bottom and sides of the page as in an ordinary Indian Again, on Tuesday, 2nd December A D 836, it is clearly indicated that it was the 20th day of Dhanus or Māngali month of Anala year, and Bahula Panchadası or Amavasyā of Lunar Māroasusha, ending at 12 (= 7 ghatikas, or 3)hours) after mean sunrise, a day of nakshatra 'Purva Āshādha' (No 20) ending at 58 of day (= 35 ghatikas, or 14 hours) after mean sunrise, and lastly the 28th It is equally clear that Friday 22nd Dec day of Zi l hijja month of Hijra 221 ember, was the first day of Makara or Tar month of the same year Anala change from the last day of Hijra 221 to the first day of Hijra 222 on Thursday, 14th December AD 836 is marked with equal clearness
- 3 Cyclic and other years The headings at the top of each page compilse (1) the symbols for solar and lunar eclipse and the abbreviations for Amāvāsyā and Paurnami, (2) the serial numbers of years in the different eras, (3) the names of samvatsaras or cyclic years in Northern and Southern India and (4) the com mencement of the Indian year according to the Sūrya and Arya siddhantas, accord ing to the Kollam year and according to Hijra The Kollam year is a current one, like the AD year, while all the other Hindu years Saka, Vikrama and Kaliyuga, It should be noted that the Kaliyuga years quoted in the are expired years ordinary South Indian panchangas are current, and will be found to exceed in each case the Kaliyuga year marked in this book by one The names of solar samvatsalas, Prabhava Vibhava, etc., are quoted not only at the top of each page, but above the name of each Tamil month Thus it has been possible to give in this book for each English date the Tamil (or Mulayalam), Telugu (or Kanarese) and Muhammadan equivalents with as much fullness as in the ordinary nocket diaries. For example, against Tuesday, 21st March AD 836, one may

read off in this book, as in a pocket diary, 'Anala samvat, Chittira 1' or "Metam 1 'Anala samvat Adhika Chaitra bahula panchadasi," "nakshatra Rēvati" and "Hijra 221 Rabi ul awwal 28"

- 4 Solar and lunar reckonings—The various calendar systems followed in this country fall into two main groups namely the solar reckoning, comprising the English, Tamil, Malayalam, Oriya and Bengali reckonings and the lunar reckoning used all over India, and including the Muhammadan and Jewish reckonings. The Indian calendar is sometimes styled luni solar, because its lunar months and years cannot recede by more than  $29\frac{1}{2}$  days from the corresponding solar months and years whereas the Muhammadan or Hijra vear recedes by 10 or 11 days every year and will therefore be found to commence in all months of the Indian and English years
- 5 Column headed "Month and Day" -Solar months in India are generally named in Sanskrit after the rasis of signs of the zodiac, 'Mēsha' "Rishabha,' etc, but in Tamil they are also known by another set of names, more or less modified from names of nakshatras or lunar months, namely, 'Chattara,' Both sets of names, "Mēsha Chittirai "Rishabha Vaikasi," 'Vaikaši'' etc The days of the solar month "Mithuna Ani" etc, are quoted in this column are reckoned according to an ancient Tamil practice from the sankianti of the The rules for determining the commencement of the solar month, according to the Tamil Malayalam, Oriya and Bengali systems, with examples, are given in paragraph 12 Chapter I of Volume I A difference of a whole day or of two days would ordinarily be found between days of the Tamil It should also be noted that solar months and the corresponding Bengal days the days of the same Tamil month are not the same in number every year Thus Chittiral has ordinarily 31 days but may occasionally have 30
  - 6 Nakshatras and tithis Every Hindu feast, fast and festival (except sankrantis) is connected with either a tithi or a nal shatra or both tithi extends over 98 of a day while a mean nakshatra extends over 101 days, but the solar and lunar anomalies may make a tithi longer or shorter by 58 of a day as a maximum while the lunar anomaly may similarly affect a nakshatra to the extent of 38 of a day Hence the irregular lengths, in time of tithis and nakshatras, which make the Indian system so complicated in appearance, but which constitute a most valuable check in chronological studies the curious fact that what ought to be a normal state or things, namely each day having a ingle tithi and a single nakshatra, is seldom noticed on the successive days of a whole month Such a phenomenon occurred throughout the month of Valsakha Wednesday 26th March, to Finday 25th April A D 822, and again, throughout the month of Phalguna, Saturday 26th February, to Monday 28th It follows from what has been stated that in the course of a tunar month two tithis or two nakshatras may ordinarily be found either to occur on the same day or to cover parts of three days the middle day in the latter case being without a tithi, or without a nakshatra of its own Cases of the same day having two tithis as well as two nakshatras, as on Kārttika, bahula 11 and 12 (Wednesday, 30th October AD 709), and other cases (e.g., Saturday, 27th June AD 705) in which a day had neither a tithi nor a nakshatra of its own can be

- 7 Adhika and kshaya months —Occasionally, that is seven times in 19 years a lunar month is repeated twice in the course of the same year instance, in the year A D 836 there are two Chaitras one reckoned from Monday 21st February, to Tuesday 21st March, and the other from Wednesday 22nd The first month in such cases has the prefix March, to Wednesday 19th April adhika (= additional), and the second the prefix nija (= true) Both prefixes are duly and clearly marked in the Ephemeris More rarely also, a lunar month is suppressed altogether, and in such cases is known as kshaya (= suppressed) Thus in A D 770 the month Pausha which ought to have occurred in December The omission of a kshaya month is noted by N B at January, was suppressed the foot of the page where required The rules for determining the date of occurrence of additional and suppressed months are clearly given in paragraphs 89 to 91, pages 30 31 of Volume I of this work
- 8 Nakshatras and Ending Moments of Nakshatras —A complete list of Indian nakshatras, with the fixed stars, as identified by different authorities is given in Volume I page 35 paragraph 101. The practice of reckoning by nakshatras is peculiar to India and China and has existed in each of these countries from very ancient times. In India in Vedic times, a lunar month had no other name than that of the nakshatra in which the moon of that month became full. To this day, Chaira is the month in which the moon becomes full when occupying "Chitra" nakshatra, and so on for the other months. The concurrence of certain tithis with certain nakshatras is thus fixed within narrow limits for every month in the year and the student of inscriptions should be familiar with the table of concurrence (see the Eye table, section s)
- 9 Note on broken periods—It is of some importance that the reader dealing with the Indian or any other calendar should know thoroughly how to reckon broken periods. It is generally a question of addition or subtraction, but unless one goes through the process with some reflection, there is a danger of adding or subtracting 1 too much

To take the simplest case how many days are there from Friday in one week to Tuesday in the next? Most people would use their fingers in such a case and answer '4' or '5" according as they began the reckoning with Friday or with Saturday Such uncertainty is fatal to exact reckoning and we should therefore follow rules whereby we may avoid all uncertainty

First of all we must always note that the question is intelligible only with reference to the next subdivision of the unit of the broken period that is, in this case, from a particular hour on Friday to the same hour on Tuesday This makes the meaning quite clear. From 6 am on Friday to 6 am on Tuesday following, there are 4 complete days and the proper way to answer the question is to convert. Friday and Tuesday into week day figures 6 and 3, and to add a whole period (7) to 3 before deducting 6. Thus 7 + 3 = 10 from 10 take 6, and we have the answer, 4 days. Some exercise is necessary in order to do even these simple week day problems correctly

The rule about adding a whole period when we have to reckon from a fraction of one period to a fraction of the next is equally important. How many days are there from 6 a m 23rd October in one year to 6 a m 1 oth March in the next,

find that 23rd October is 206 days from 1st April, and 15th March (where we have had to pass 29th February) is 350 days from 1st April Deduct 206 from 350 days Answer 144 days

To take another case, suppose we are required to deduct the longitude of Jupiter from the longitude of the Sun, it being given that the former is 300 degrees and the latter 29 degrees. To answer this question we must first add 360 degrees (the whole period in this case) to 29, and then from the total 389 subtract 300, answer 89 degrees

When the 1st of a Tamil month is the 15th July what will be the 7th of the Tamil month. In such cases we must make the same addition to or the same deduction from, the one side as we make in regard to the other. In the example before us, the addition to be made is 6 and the answer 21st July

When the 1st of a Tamil month is the 15th July, what will be the 29th of the Tamil month? We add 28 to each side. Therefore the answer is 15 + 28 = 43rd July from which we deduct the whole of the completed period (July =) 31 days. Final answer, 43 minus 31 = 12th August

Madras, January 1922
